SUMMARY

Software Engineer with a backend core: production order, returns and observability services in Node.js/TypeScript at OZi, and Java Spring Boot microservices in healthcare before that. Also ships full-stack products with React/Next.js, PostgreSQL and CI/CD.

EXPERIENCE

Backend Developer · OZi · *Quick Commerce* — May 2026 – Present

- Built AWS SQS FIFO workflows for inventory, logistics, wallet settlement and notifications, plus claim-based redrive that prevented duplicate wallet deductions.
- Built error grouping, latency percentiles, SLOs, error budgets, Slack alerts and a unified order timeline across 26 data sources.
- Designed return and exchange pickup capacity end to end — MySQL schema, IST-aware engine, CX overrides and admin UI — verified with 180+ tests.
- Shipped failed-return rescheduling with eligibility checks, WhatsApp notifications, deep-link CTAs and quiet-hours-aware reminders.

Stack: Node.js · TypeScript · Express.js · AWS SQS (FIFO) · MySQL · Redis · Jest

Software Engineer Intern – Backend · Bajaj Finserv Health · *Healthcare* | Certificate — Jul – Oct 2025

- Raised backend throughput to 300+ requests/second under concurrent load — a 3–4× improvement over the legacy implementation.
- Spring Boot microservices for the Universal Provider Portal (UPP), serving 50+ partner hospitals and 100K+ daily transactions at 99.9% uptime.
- Centralized structured logs and real-time Kibana dashboards on the ELK Stack, cutting mean time to resolution for production incidents by 40%.
- Paired PostgreSQL with a Redis caching layer for hot data to cut critical API response times by 30–35%.
- Automated ArgoCD-driven CI/CD deployments, halving manual deployment effort and enabling zero-downtime releases.

Stack: Java · Spring Boot · PostgreSQL · Redis · ELK · ArgoCD

SELECTED PROJECTS

Ekayu · Full-stack · Data | GitHub — Aug 2026 – Present

A personal health and life-record app, built solo as a 7-package TypeScript monorepo on PostgreSQL and Supabase — 115 pages and 103 tables behind strict CI checks.

- Append-only data model — edits add corrections instead of overwriting, so any past state stays queryable
- Offline sync built from scratch: a device-side queue and logical clocks to order cross-device edits
- Idempotency keys so retries never log the same dose or workout twice
- Closed by default — row-level security forced with zero policies, so the public API key reaches nothing, verified by a dedicated test suite

Live Polling System · Full-stack · Real-time | GitHub — Feb 2026

- Atomic vote writes in MongoDB, so a student can never vote twice on the same poll
- Sessions survive a page refresh; teachers can see and remove participants live

Proximity Ad Delivery · IoT · Backend | GitHub — Oct 2024 – Feb 2025

- Detects 20+ nearby BLE devices per node in under 100 ms
- Proximity-targeted, Gemini-generated ads drove 35–40% higher engagement

TECHNICAL SKILLS

Languages	Java, TypeScript, JavaScript, Python, SQL
Frontend	React, Next.js, Tailwind CSS, HTML & CSS, Framer Motion
Backend & Frameworks	Node.js, Express.js, NestJS, Spring Boot, REST APIs, WebSockets, gRPC, Microservices
Databases	MySQL, PostgreSQL, MongoDB, Redis, Supabase
Messaging & Architecture	AWS SQS (FIFO), Apache Kafka, Event-Driven, Distributed Systems, Idempotency
Cloud & DevOps	AWS, Docker, GitHub Actions, ArgoCD, Vercel, Sentry, ELK
Testing & Core CS	Jest, Puppeteer, System Design, OOP, DSA

EDUCATION & LEADERSHIP

B.Tech, Computer Science & Engineering · The LNM Institute of Information Technology, Jaipur — CGPA 7.64 / 10 · Oct 2022 – May 2026

Leadership: Coordinator, Table Tennis Club · Executive Member, Training & Placement Cell · Member, Entrepreneurship Club
